Fire Hydrant Meter Check Out & Operating Instructions

1. Hydrant meter use is solely permitted within the City of North Las Vegas (CNLV) water service area boundaries & within the public right of way. To use new construction hydrants prior authorization from Developer must be obtained.
2. Permittee shall inform CNLV if the hydrant meter will be attached to underground piping and/or anytime a hose/pipe 100' or greater will be used. In such cases a backflow device will be attached to the hydrant meter.
3. Prior to operating the Fire Hydrant ensure meter valve is in the closed position. Using a fire hydrant wrench, slowly turn on hydrant valve until completely opened. Failure to open or close the hydrant completely will cause extensive underground damage. Failing to use appropriate wrench will cause damage to the hydrant operating components.
4. Connect hose to meter and use 2" meter valve not the hydrant valve to control water flow.
5. When finished 1st turn off the meter valve and then slowly turn off the hydrant valve completely.
6. Do not leave the hydrant or the meter in the open position while unattended or overnight.
7. For usage verification and record keeping purposes taking a daily reading is recommended. Permittee may also place a lock on the meter valve to prevent unauthorized use.

Permittee is authorized to draw water from public (yellow) hydrants within the CNLV water system using the CNLV provided hydrant meter, and is responsible for payment of all water usage recorded through the meter. Water service will be provided in accordance with The City of North Las Vegas Utilities Department service rules and regulations. Failure to comply with any provision of the permit, including account delinquency, will be cause for immediate permit termination and removal of hydrant meter. Meter tampering will result in a fine of \$2,500 and/or arrest and prosecution to the full extent of the law. Permittee should observe meter operation regularly and if found leaking or non-functioning report it to CNLV immediately for investigation and repair. Meters determined by CNLV to be unrepairable due to Permittee negligence will be replaced at the Permittee's sole cost. In the event the meter is no longer recording water use accurately, usage may be estimated by CNLV and Permittee is responsible for payment of estimated consumption.

Permittee accepts full responsibility and will be billed for all damages to CNLV facilities, public/private property including but not limited to, the fire hydrant, meter, valve, lateral, mains and appurtenances related thereto. If final cost to repair or replace damaged or missing facilities exceeds the deposit amount, Permittee agrees to pay the difference within 21 days of invoice.

In the event a hydrant meter is approved for mobile use, Permittee is subject to above regulations and will be required to provide monthly meter readings, location, & contact person to CNLV on the 28th day of each month. Failure to do so will result in a \$250.00 fine for each month without read submission. Meter must be made available for inspection/return when requested and is not to be mounted to a vehicle. No water may be taken using this meter from any other area water systems (Las Vegas Valley Water District, Henderson, etc.). In the event a meter is lost/stolen permittee must file a police report, submit it to CNLV, and will be subject to a \$2,500.00 fine.

Permittee agrees to abide by all conditions set forth in the document and will ensure all operators are trained prior to use of the Hydrant Meter.
